Kenco Singles Brewer

A stylish and reliable table top hot drinks system suitable for offices, reception areas and meeting rooms

Introducing the new Kenco Singles Brewer

Better than ever... meet the new Kenco Singles Brewer

Renowned and trusted, the Kenco Singles table top system now brings even greater benefits to your office, meeting and reception spaces. The new generation brewer adds even greater value:

- a smaller footprint to save on space
- a sleek and contemporary new look
- easier access to machine components

...and we've kept the characteristics that you love about the Kenco Singles brewer

- unrivalled reliability and performance
- robust design giving the brewer longevity
- a delicious range of quality hot beverages – coffee, tea and hot chocolate
- all the brands you know, love and trust.

The secret lies with the capsule...

...with just a little bit of magic. Each capsule has its own special filter system and contains just the right amount of coffee, tea or hot chocolate which is foil sealed for freshness. The intelligent capsule then tells the system what drink it is and its perfect brewing time to give you that freshly brewed taste in every drink. What's more, with the Kenco Singles system there is total portion control.

Perfect beverage solutions...

Freshness and flavour with every Kenco Singles drink

Delighting customers and consumers with great selections of fresh-brewed teas, coffees and hot chocolate has always been a Singles strength. Each foil-sealed, portion-controlled capsule locks in the freshest flavour and inspires absolute confidence in every consumer.

Drinks from the brands you know, love and trust

Kenco Singles is the perfect way to provide your consumers with a luscious choice of hot beverages from their favourite brands. Kenco, Carte Noire, Suchard, PG tips, Twinings and Cadbury* offer a great selection ideal for everyone's taste.

New contemporary look

Proving that good things really do come in small packages, the brewer's contemporary design and space-saving footprint are a welcome addition to any office, meeting room or reception area. The new arrival celebrates all the style, choice and reliability that customers and consumers love about Kenco Singles.

24%
smaller footprint
compared to our
previous brewer

Dependable and versatile

The Kenco Singles system is not only simple to use, it's also outstandingly reliable and a dream to maintain. With its electronic components conveniently located on one side of the machine, maintenance access is quick and easy. It's versatile too: choose between permanent plumb and portable manual fill options.

ELECTRICAL SUPPLY: The machine runs from a 230V 50Hz single-phase supply and is fitted with a 2m power cable terminated with a BS 1363 plug fused at 13A. This should be connected to a switched socket installed according to the latest version of the I.E.E Wiring Regulations.

WATER SUPPLY: The machine should be situated within 1 metre of a drinking water supply from a rising main, terminated at a W.R.C approved 15mm compression stoptap. This water supply should comply with both: a) Statutory Instrument Number 1147 'Water England and Wales' b) The Water Supply (Water Quality) Regulations 1989. Water pressure at the stoptap must be within the limits of 0.2 – 10 bar.

PUMP FILL: If the machine is fitted with a 'Water Bottle Pump Kit', it can be connected to an external drinking water container.

MANUAL FILL: The machine may be filled manually by opening the front cover to expose the filling funnel. The tank has an average working capacity of 25 cups between refills.

CAUTION: This machine should not be used with artificially softened water. Water temperature tank set to heat water to 96°C within the machine. Drink temperature will be between 80-90°C depending on the temperature from the tank and the type of cup used – china/paper. Time to reach operable temperature is 15 minutes from cold.

POWER RATING: The machine is rated at 2kW and the maximum current drawn is 9A.

SYSTEM INFORMATION: Capsule bin capacity. The capsule bin will hold up to 25 used capsules. Capacity can be increased by mounting the machine on a Kenco base cabinet. We recommend that the Kenco Singles brewer be fitted with a high-grade water filter when plumbed, to ensure that the optimum drink is dispensed. Water filters can be ordered as an optional extra and must be replaced every six months (code 42898).

*Coming in 2012

Kenco Singles – our favourite brands, fresh everytime.
